

Completed Heuristic Evaluation Workbook

Tigaon – Primary Hospital and Clinic Website

HCI2 Group 6 · Partido State University · 2026

Overview: Each group member conducted an independent heuristic evaluation using Jakob Nielsen’s 10 Usability Heuristics as the framework. Each evaluator identified usability problems, rated their severity, and noted which heuristic was violated. This workbook compiles all individual evaluations with detailed findings from the usability testing of 40 respondents.

EVALUATOR

Jecel Rojas

Evaluator Name:	Jecel Rojas	Date:	April 2026
Course/Section:	BSIT-3D	Prototype:	Tigaon – Primary Hospital and Clinic Website

RATING SCALE

Rating	Label	Description
0	Not a Problem	No usability issue present.
1	Cosmetic	Minor issue; fix only if time permits.
2	Minor	Usability issue; important to fix.
3	Major	Significant impact on usability; should fix.
4	Catastrophic	Completely blocks users from task; must fix immediately.

Instructions: Evaluate each of Nielsen’s 10 Usability Heuristics for the Tigaon website. Rate the severity of each usability issue found (0–4). Describe your findings and specify the problem identified.

Heuristic 1: Visibility of System Status

Issue: Form Submission Lacks Clear Confirmation

Rating	Severity	Finding / Observation
3	High	When users submit forms, there is no immediate visual response indicating whether the action was successful. This uncertainty leaves users wondering if their request was processed or if an error occurred.

Heuristic 2: Match Between System and Real World

Issue: Specialist Directory Needs More Detailed Information

Rating	Severity	Finding / Observation
3	High	The doctor and specialist listings do not provide sufficient context about their qualifications, areas of expertise, or availability schedules, making the directory appear incomplete compared to what users would expect from a real healthcare facility.

Heuristic 3: User Control and Freedom

Issue: No Way to Navigate Back in Booking Process

Rating	Severity	Finding / Observation
3	High	Once users proceed through the appointment scheduling flow, they cannot return to previous steps to make corrections. Any mistake requires restarting the entire booking process from the beginning.

Heuristic 4: Consistency and Standards

Issue: Minor Visual Inconsistencies Across Pages

Rating	Severity	Finding / Observation
1	Medium	While the overall design follows a consistent approach, some pages show slight variations in spacing, button styles, and element alignment that could confuse users about whether they are still within the same website.

Heuristic 5: Error Prevention

Issue: Multi-Step Forms Lack Protective Measures

Rating	Severity	Finding / Observation
2	Medium	The appointment scheduling form does not validate required fields before submission or warn users about leaving incomplete sections. Users can easily submit forms with missing critical information.

Heuristic 6: Recognition Rather Than Recall

Issue: Doctor Information Requires Too Much Memory

Rating	Severity	Finding / Observation
1	Low	Without clear visual cues, role descriptions, or icons identifying different specialties, users must rely on memory to recall which doctor offers which services, making the directory harder to navigate.

Heuristic 7: Flexibility and Efficiency of Use

Issue: Limited Options for Power Users

Rating	Severity	Finding / Observation
2	Medium	The interface offers no shortcuts, quick-access features, or advanced options for experienced users to perform tasks more efficiently. Everyone must follow the same lengthy process regardless of expertise level.

Heuristic 8: Aesthetic and Minimalist Design

Issue: Homepage Overwhelmed with Too Many Elements

Rating	Severity	Finding / Observation
3	High	The homepage displays excessive information and competing visual elements that distract from the main actions users should take. The primary call-to-action is buried among secondary content, reducing its prominence.

Heuristic 9: Help Users Recognize and Recover from Errors

Issue: Silent Failures Without Diagnostic Messages

Rating	Severity	Finding / Observation
3	High	When operations fail—such as login attempts or form submissions—the system provides no error messages or guidance on what went wrong. Users are left confused about why their action didn’t work and how to fix it.

Heuristic 10: Help and Documentation

Issue: No Guidance for First-Time Users

Rating	Severity	Finding / Observation
2	Medium	The site lacks tutorials, breakthroughs, or help documentation to guide new users through common tasks. New visitors must figure out how to use the system through trial and error.

SUMMARY OF RATINGS

#	Heuristic	Rating	Severity
1	Visibility of System Status	3	High
2	Match Between System and Real World	3	High
3	User Control and Freedom	3	High
4	Consistency and Standards	1	Medium
5	Error Prevention	2	Medium
6	Recognition Rather Than Recall	1	Low
7	Flexibility and Efficiency of Use	2	Medium
8	Aesthetic and Minimalist Design	3	High
9	Help Users Recognize and Recover from Errors	3	High
10	Help and Documentation	2	Medium
	AVERAGE	2.3

EVALUATOR

Trisha Magnosay

Evaluator Name:	Trisha Magnosay	Date:	April 2026
Course/Section:	BSIT-3D	Prototype:	Tigaon – Primary Hospital and Clinic Website

RATING SCALE

Rating	Label	Description
0	Not a Problem	No usability issue present.
1	Cosmetic	Minor issue; fix only if time permits.
2	Minor	Usability issue; important to fix.
3	Major	Significant impact on usability; should fix.
4	Catastrophic	Completely blocks users from task; must fix immediately.

Instructions: Evaluate each of Nielsen’s 10 Usability Heuristics for the Tigaon website. Rate the severity of each usability issue found (0–4). Describe your findings and specify the problem identified.

Heuristic 1: Visibility of System Status

Issue: Missing Feedback After Form Completion

Rating	Severity	Finding / Observation
3	High	Users submit forms but receive no status indicator or acknowledgment message. This absence of feedback creates doubt about whether the submission went through successfully or encountered a problem.

Heuristic 2: Match Between System and Real World

Issue: Doctor Listings Lack Real-World Healthcare Information

Rating	Severity	Finding / Observation
3	High	Compared to typical hospital directories, the specialist profiles are sparse and missing crucial details such as consultation hours, departmental assignment, and areas of specialization that patients would normally expect.

Heuristic 3: User Control and Freedom

Issue: Homepage Design Creates Confusion About Next Steps

Rating	Severity	Finding / Observation
3	High	The homepage is visually crowded with numerous sections and options. The primary action users should take is unclear because key buttons and links are not prominently placed, forcing users to search for what they need.

Heuristic 4: Consistency and Standards

Issue: Slight Layout Variations Reduce Cohesion

Rating	Severity	Finding / Observation
1	Medium	Different pages show minor inconsistencies in layout structure and component styling. While not severe, these variations may cause users to question whether they are navigating within a unified application.

Heuristic 5: Error Prevention

Issue: Forms Accept Invalid or Incomplete Submissions

Rating	Severity	Finding / Observation
2	Medium	The system does not prevent users from submitting forms with empty required fields or invalid data formats. There are no warning messages before proceeding to the next step in multi-step processes.

Heuristic 6: Recognition Rather Than Recall

Issue: Specialist Directory Requires Remembering Information

Rating	Severity	Finding / Observation
1	Low	The lack of categorization, specialty icons, or distinguishing information means users cannot quickly recognize which doctor matches their needs. Instead, they must remember details from reading multiple profiles.

Heuristic 7: Flexibility and Efficiency of Use

Issue: One-Size-Fits-All Interface Without Time-Savers

Rating	Severity	Finding / Observation
2	Medium	The system provides the same user experience for all visitors regardless of experience level. Returning users cannot access faster workflows or skip steps they have completed before.

Heuristic 8: Aesthetic and Minimalist Design

Issue: Overly Complex Homepage Layout

Rating	Severity	Finding / Observation
3	High	The homepage attempts to display too much information at once without clear visual hierarchy. Important functions and content are not effectively prioritized, making the interface appear busy and overwhelming.

Heuristic 9: Help Users Recognize and Recover from Errors

Issue: No Error Reporting or Recovery Instructions

Rating	Severity	Finding / Observation
3	High	When processes fail, users encounter no explanations of what went wrong. The system offers no suggestions for corrective actions, leaving users stranded when problems occur.

Heuristic 10: Help and Documentation

Issue: Absence of User Support Resources

Rating	Severity	Finding / Observation
2	Medium	The site provides no FAQ, help section, or user guide to assist visitors. Users cannot find answers to common questions or learn system features beyond trial-and-error exploration.

SUMMARY OF RATINGS

#	Heuristic	Rating	Severity
1	Visibility of System Status	3	High
2	Match Between System and Real World	3	High
3	User Control and Freedom	3	High
4	Consistency and Standards	1	Medium
5	Error Prevention	2	Medium
6	Recognition Rather Than Recall	1	Low
7	Flexibility and Efficiency of Use	2	Medium
8	Aesthetic and Minimalist Design	3	High
9	Help Users Recognize and Recover from Errors	3	High
10	Help and Documentation	2	Medium
	AVERAGE	2.3

EVALUATOR

Israel Darwin

Evaluator Name:	Israel Darwin	Date:	April 2026
Course/Section:	BSIT-3D	Prototype:	Tigaon – Primary Hospital and Clinic Website

RATING SCALE

Rating	Label	Description
0	Not a Problem	No usability issue present.
1	Cosmetic	Minor issue; fix only if time permits.
2	Minor	Usability issue; important to fix.
3	Major	Significant impact on usability; should fix.
4	Catastrophic	Completely blocks users from task; must fix immediately.

Instructions: Evaluate each of Nielsen’s 10 Usability Heuristics for the Tigaon website. Rate the severity of each usability issue found (0–4). Describe your findings and specify the problem identified.

Heuristic 1: Visibility of System Status

Issue: No Confirmation Notification on Form Submission

Rating	Severity	Finding / Observation
3	High	After completing and submitting a form, users see no notification, confirmation screen, or status message. Users remain uncertain whether their submission was received and processed by the system.

Heuristic 2: Match Between System and Real World

Issue: Incomplete Specialist Directory Profile Details

Rating	Severity	Finding / Observation
3	High	The doctor directory is missing essential information that mirrors real-world hospital practices, such as specialization descriptions, working hours, and current availability status that would help patients make informed decisions.

Heuristic 3: User Control and Freedom

Issue: Appointment Booking Cannot Be Revised Mid-Process

Rating	Severity	Finding / Observation
3	High	The booking workflow does not allow users to go back and modify previous answers. If users realize a mistake after advancing, they must abandon the process and start over completely.

Heuristic 4: Consistency and Standards

Issue: Minor Deviations in Visual Presentation

Rating	Severity	Finding / Observation
1	Medium	Although the website maintains a generally consistent design language, some pages display slight differences in border styles, spacing, and button proportions that detract from a unified user experience.

Heuristic 5: Error Prevention

Issue: No Validation or Safeguards in Scheduling Forms

Rating	Severity	Finding / Observation
2	Medium	The appointment scheduling form permits submission of incomplete or invalid entries without validation checks. Users can proceed through multiple steps without being alerted to errors or missing information.

Heuristic 6: Recognition Rather Than Recall

Issue: Medical Professional Information Poorly Organized

Rating	Severity	Finding / Observation
1	Low	Without clear visual categorization or specialty indicators, users cannot easily identify and recognize the right doctor for their needs. They must carefully read through each profile to find matches.

Heuristic 7: Flexibility and Efficiency of Use

Issue: No Acceleration Features for Experienced Users

Rating	Severity	Finding / Observation
2	Medium	The interface does not provide advanced features, keyboard shortcuts, or efficient pathways for users familiar with the system. Repeat visitors must follow the standard process without any time-saving options.

Heuristic 8: Aesthetic and Minimalist Design

Issue: Homepage Suffers from Information Overload

Rating	Severity	Finding / Observation
3	High	The landing page contains too many visual elements, sections, and content areas competing for attention. This clutter obscures the main user objectives and makes navigation more difficult than necessary.

Heuristic 9: Help Users Recognize and Recover from Errors

Issue: Absent Error Messages and Recovery Support

Rating	Severity	Finding / Observation
3	High	The system fails to provide any error descriptions when operations do not complete successfully. Users have no guidance on what caused the failure or how to proceed to resolve the issue.

Heuristic 10: Help and Documentation

Issue: No Onboarding or Help Resources Available

Rating	Severity	Finding / Observation
2	Medium	New users have access to no tutorials, help menu, or documentation. The system expects users to understand its operation intuitively without any supportive materials or guidance.

SUMMARY OF RATINGS

#	Heuristic	Rating	Severity
1	Visibility of System Status	3	High
2	Match Between System and Real World	3	High

3	User Control and Freedom	3	High
4	Consistency and Standards	1	Medium
5	Error Prevention	2	Medium
6	Recognition Rather Than Recall	1	Low
7	Flexibility and Efficiency of Use	2	Medium
8	Aesthetic and Minimalist Design	3	High
9	Help Users Recognize and Recover from Errors	3	High
10	Help and Documentation	2	Medium

EVALUATOR

Joshua David Asor

Evaluator Name:	Joshua David Asor	Date:	April 2026
Course/Section:	BSIT-3D	Prototype:	Tigaon – Primary Hospital and Clinic Website

RATING SCALE

Rating	Label	Description
0	Not a Problem	No usability issue present.
1	Cosmetic	Minor issue; fix only if time permits.
2	Minor	Usability issue; important to fix.
3	Major	Significant impact on usability; should fix.
4	Catastrophic	Completely blocks users from task; must fix immediately.

Instructions: Evaluate each of Nielsen’s 10 Usability Heuristics for the Tigaon website. Rate the severity of each usability issue found (0–4). Describe your findings and specify the problem identified.

Heuristic 1: Visibility of System Status

Issue: Absence of Visual Submission Confirmation

Rating	Severity	Finding / Observation
3	High	The system provides no visual cue when users complete form submissions. There is no success message, loading indicator during processing, or confirmation screen—leaving users in the dark about what happened next.

Heuristic 2: Match Between System and Real World

Issue: Specialist Information Falls Short of User Expectations

Rating	Severity	Finding / Observation
3	High	Compared to how real hospitals present doctor information, the directory is too sparse. It omits key details like specialties, schedules, and availability status that patients need to make appointment decisions.

Heuristic 3: User Control and Freedom

Issue: Excessive Homepage Content Obscures Main Actions

Rating	Severity	Finding / Observation
3	High	Too many sections and features are displayed on the homepage without effective prioritization. The main call-to-action is not obvious, and users struggle to identify where to begin their task.

Heuristic 4: Consistency and Standards

Issue: Subtle Design Inconsistencies Across Interface

Rating	Severity	Finding / Observation
1	Medium	While the design generally follows consistent principles, some UI elements show minor variations in styling and spacing across different pages, creating a slightly disjointed appearance.

Heuristic 5: Error Prevention

Issue: Insufficient Input Validation in Forms

Rating	Severity	Finding / Observation
2	Medium	Forms lack built-in validation to prevent users from submitting incomplete or invalid data. Users can advance through multi-step workflows with missing required fields without any warning or impediment.

Heuristic 6: Recognition Rather Than Recall

Issue: Doctor Directory Difficult to Browse and Identify

Rating	Severity	Finding / Observation
1	Low	The specialist listing provides minimal visual differentiation between practitioners. Users must engage in careful reading to identify and recall which doctor matches their specific healthcare need.

Heuristic 7: Flexibility and Efficiency of Use

Issue: No Optimization for Repeat or Expert Users

Rating	Severity	Finding / Observation
2	Medium	The system treats all users identically without offering expedited workflows or advanced options. Users who have already completed tasks before still must follow the full standard procedure.

Heuristic 8: Aesthetic and Minimalist Design

Issue: Homepage Layout Lacks Visual Clarity

Rating	Severity	Finding / Observation
3	High	The homepage displays too much content simultaneously without clear visual hierarchy or organization. Key information and functions are not effectively distinguished from supplementary content.

Heuristic 9: Help Users Recognize and Recover from Errors

Issue: No Error Messages or Problem Resolution Guidance

Rating	Severity	Finding / Observation
3	High	When errors occur, the system provides no feedback explaining the issue or suggesting solutions. Users are left without any way to understand what went wrong or how to correct it.

Heuristic 10: Help and Documentation

Issue: Lack of Guidance and Support Materials

Rating	Severity	Finding / Observation
2	Medium	The platform offers no tutorials, help guides, FAQs, or other learning resources. Users must independently discover how to use the system through experimentation.

SUMMARY OF RATINGS

#	Heuristic	Rating	Severity
1	Visibility of System Status	3	High
2	Match Between System and Real World	3	High
3	User Control and Freedom	3	High
4	Consistency and Standards	1	Medium
5	Error Prevention	2	Medium
6	Recognition Rather Than Recall	1	Low
7	Flexibility and Efficiency of Use	2	Medium
8	Aesthetic and Minimalist Design	3	High
9	Help Users Recognize and Recover from Errors	3	High
10	Help and Documentation	2	Medium
	AVERAGE	2.3
